# WHAT IS STRETCH CEILING ?

Stretch Ceiling is a suspended ceiling system consisting of two basic components - a perimeter track and a lightweight fabric membrane which stretches and clips into the track. In addition to ceilings the system can be used for wall coverings, light diffusers, floating panels and creative shapes. Stretch Ceilings allow the incorporation of all types of light fixtures, grills and fixing points by the use of a background support. Nearly all types of apertures can be incorporated.

## An Easy Ceiling to Install

- Simple preparation work with fitting in few hours
- Dry worksite with no smells and no dusts
- Installation possible in an existing Living Space

## An Easy Ceiling to adapt

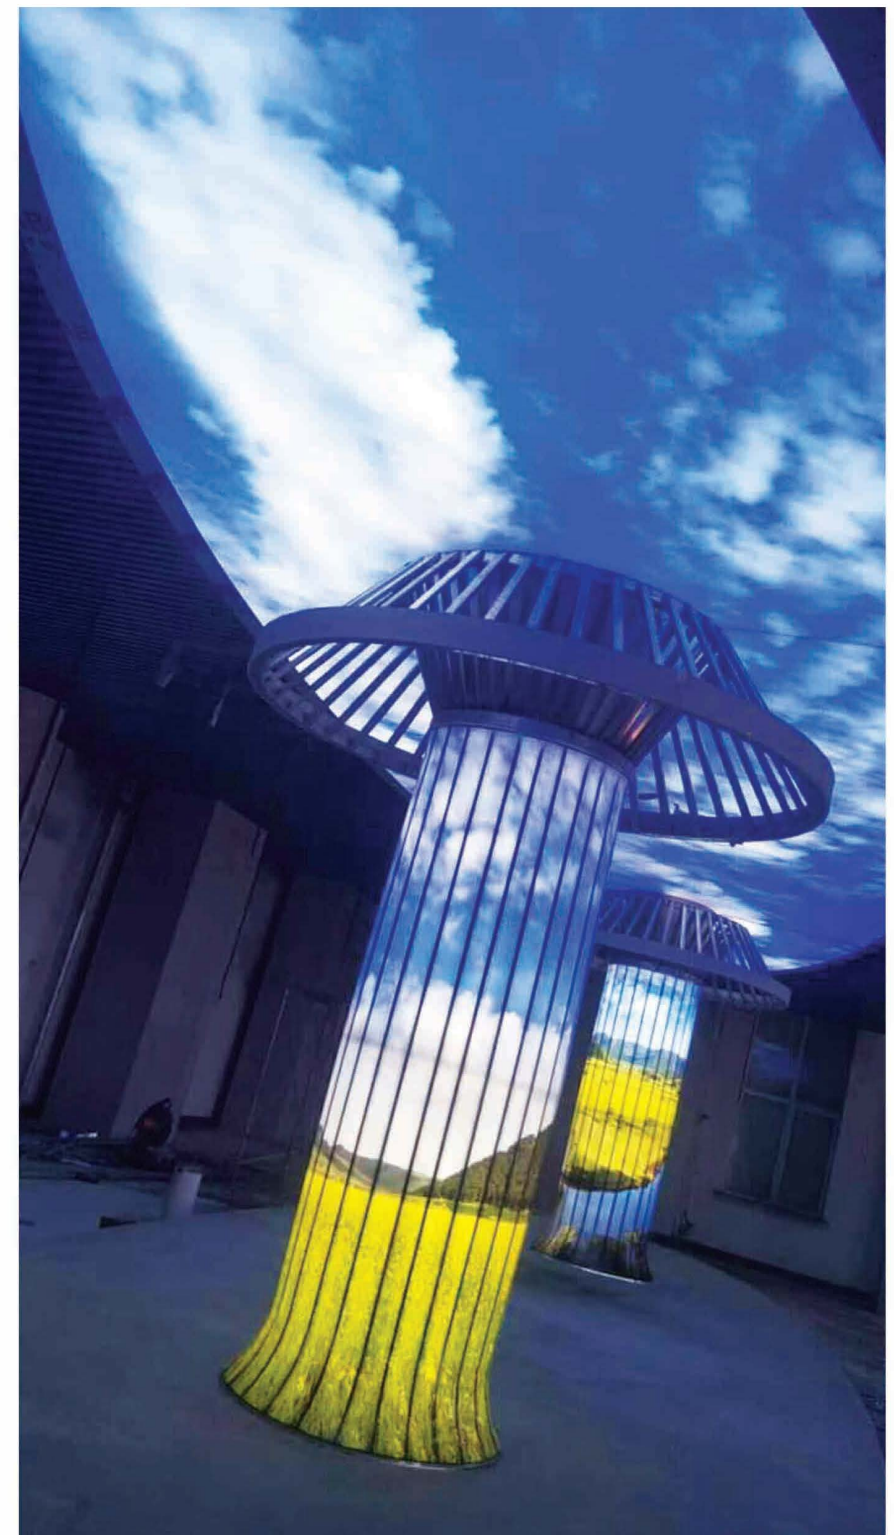

- Possibility of adding lighting points, air vents, detectors, etc
- Access to all pre-existing pipes and cables
- Possible to dismantle and reinstall

## A Decorative Ceiling with a perfect finish

- Exceptional finishing
- Optimum tension for a matchless, perfectly flat surface
- Feeling of balance and harmony
- Integration of lighting and other accessories
- Discreet concealment of pipes and cables, whilst maintaining ease of access

## Extra comfort

- Improvement of temperature comfort by means of an insulating cushion of air
- Excellent results when combined with thermal insulation
- Improved acoustic comfort, a warm, protected atmosphere
- Creation of high acoustic quality space with perforated stretch ceilings
- Visual comfort, an impression of greater space, a feeling of well-being
- Dust-tight

**Build Your Best Without Limits or Compromise  
with our 5 Metre HD UV Printer**

UV printing is a form of digital printing that uses ultra-violet lights to dry or cure ink as it is printed. As the printer distributes ink on the surface of a material (called a "substrate"), specially designed UV lights follow close behind, curing- or drying - the ink instantly. Because the UV lights cure any printed ink immediately, the dots of wet ink do not get a chance to spread out once printed, resulting in much finer detail. In addition, UV cured inks are weather-resistant and offer increased longevity. This curing process is more environment friendly as it produces few VOCs, odour, and heat.

With an in-house 5M UV Printer, we can offer a seamless printed ceiling without joints upto 50 SQM

## PERFORATED FILM

Perforated Film is known as an acoustic ceiling as well. The minimum diameter of the holes can be 0.1MM, which cancels the noise in a room.

## METALLIC FILM

Its Metallic surface and luster brings a classic view to the area

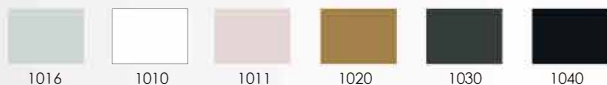

## TRANSLUCENT CEILING

It's a translucent film that transmits light upto 75% in a completely closed room.

## SATIN FILM

It looks more gentle than a glossy film, providing an aesthetic look to the room.

## GLOSSY STRETCH CEILING

## MATT STRETCH CEILING

Matt texture - the complete absence of glint - the classic view of the ceiling for lovers of classic interior solutions. Recreates a perfectly plastered ceiling with light colors, including white.
